Potential protein coding regions were assigned on the basis of

similarity search of the ORFs and GeneMark analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        130001 bp

Genome sequence of Vibrio parahaemolyticus: a pathogenic mechanism
distinct from that of V cholerae
Lancet 361 (9359), 743-749 (2003)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This work was done in collaboration with Kozo Makino, Ken Kurokawa, Katsushi Yokoyama, Takayuki Uda, Kenichi Tagomori, Masatomo Najima, Masayuki Nakano, Yoshino Kubota, Shigenobu Kimura, Teruo Yasunaga, Takeshi Honda, Hideo Shinagawa, Tetsuya Iida (Gsaka University), Yoshio Iijima (Kobe Institute of Health), and supported by the Research for the Future Program of the Japan Society for the Promotion of Science. This clone was isolated from a patient presenting with acute gastroenteritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Kanagawa 228-855, Japan
